

What is different about this CAHSEE math book?

Dr. Clark applies her knowledge of math and test anxiety reduction to help students at risk of not passing CAHSEE math.

Students project what their score might be by analyzing what they know and then create a targeted study plan.

Mr. Smith applies his expertise in curriculum and instruction to group math content by concepts in order to make the mathematics review easily manageable.

This further reduces the anxiety of students who struggle with math.

This book is ideal for students who experience high math anxiety as well as test anxiety. It is great for students who study for CAHSEE math independently as well as in a classroom tutoring environment.

The book is also designed for students who retake CAHSEE math because one or more previous attempts were unsuccessful.

Schools can use this book for short term intensive review courses, after school tutoring, or ongoing in class review.

Adult, continuation, and traditional high schools can work with students to complete the study plan in the book and to mutually contract deadlines to complete the study plan.

Lastly, the self-assessment that allows students to project how they might perform on the CAHSEE math test is a wonderfully helpful tool that parents can easily follow.

As a result, parents can better support their children to develop an effective and focused study plan.

The study plan page combined with the continuous referencing of which standard is being reviewed further helps parents keep their children accountable for studying the specific math content that students need to review.
