

Contents

2.f.	Students know plants use carbon dioxide (CO_2) and energy from sunlight to build molecules of sugar and release oxygen.....	132
2.g.	Students know plant and animal cells break down sugar to obtain energy, a process resulting in carbon dioxide (CO_2) and water (respiration)	141
	Standard Set 3. Earth Sciences (Earth's Water) Water on Earth moves between the oceans and land through the processes of evaporation and condensation	149
3.a.	Students know most of Earth's water is present as salt water in the oceans, which cover most of Earth's surface.....	149
3.b.	Students know when liquid water evaporates, it turns into water vapor in the air and can reappear as a liquid when cooled or as a solid if cooled below the freezing point of water	153
3.c.	Students know water vapor in the air moves from one place to another and can form fog or clouds, which are tiny droplets of water or ice, and can fall to Earth as rain, hail, sleet, or snow	164
3.d.	Students know that the amount of fresh water located in rivers, lakes, underground sources, and glaciers is limited and that its availability can be extended by recycling and decreasing the use of water	173
3.e.	Students know the origins of the water used by their local communities.....	185
	Standard Set 4. Earth Sciences (Weather) Energy from the Sun heats Earth unevenly, causing air movements that result in changing weather patterns	192
4.a.	Students know uneven heating of Earth causes air movements (convection currents).....	192
4.b.	Students know the influence that the ocean has on the weather and the role that the water cycle plays in weather patterns	201
4.c.	Students know the causes and effects of different types of severe weather.....	210
4.d.	Students know how to use weather maps and data to predict local weather and know that weather forecasts depend on many variables.....	222
4.e.	Students know that the Earth's atmosphere exerts a pressure that decreases with distance above Earth's surface and that at any point it exerts this pressure equally in all directions	235
	Standard Set 5. Earth Sciences (The Solar System) The solar system consists of planets and other bodies that orbit the Sun in predictable paths.....	240
5.a.	Students know the Sun, an average star, is the central and largest body in the solar system and is composed primarily of hydrogen and helium	240
5.b.	Students know the solar system includes the planet Earth, the Moon, the Sun, eight other planets and their satellites, and smaller objects, such as asteroids and comets.....	245
5.c.	Students know the path of a planet around the Sun is due to the gravitational attraction between the Sun and the planet.....	259
