

Math Program — Grade 1

Section 3: Measurement and Geometry

Student Exercise: Which Weighs More or Less?

Draw a circle around the object that weighs **more**.

Draw a circle around the object that weighs **less**.

Student Exercise: Non-standard Units of Measurement

Use some scales for weighing and find some objects for balancing

For Example: cubes or coins
Put an apple on one side of the scale.
Put some cubes or coins on the other side of the scale. How many coins does it take to balance the apple so that both sides are even?

Choose some different things to weigh.
Estimate how many coins. Fill in the chart.

Object	I estimate	Weights the same as
An apple	8 coins	10 coins
