

Set 3. Life Sciences: *Survival*

Memory Jiggler

Remember when you studied different environments like forests, deserts, tundra, wetlands, and oceans?

Let's visit some of those places again.

You know the world is a really big place!! There are plants and animals all around the world and they are living and thriving, even though the environments may be very different.

- Plants and animals live in tropical rain forests where it's hot and rainy and northern forests where it snows all winter.

- They live in deserts where it is hot and dry and in oceans where it's cold and wet!

- They live in high mountains and in rivers and ponds.
